Bias and Diabetes Technology: Moving from Recognition to Remedy

Join us as we explore the practical realities of bias when having technology conversations to better tailor treatments for Type 1 Diabetes patients in a national webinar presentation and live discussion with Dr. Alice Cheng and two guest educators.

DATE	Friday, May 17th, 2024
TIME	12:00 PM PDT
REGISTRATION	https://forms.gle/q2XUvwYm6UCR3Kvn7

RSVP

Presented by:

Alice Cheng, MD, FRCPC
Adult Endocrinologist, Trillium Health Partners & St. Michael's Hospital
Associate Professor, University of Toronto

The **1-hour** session will explore the barriers patients face when accessing diabetes technology in 2 parts.

Part 1

Dr. Cheng will discuss how recognizing bias can help healthcare professionals positively impact patient care and outcomes.

1. Recognize how implicit bias can influence the use of diabetes technology for patients.
2. Provide recommendations better address patient needs with technology.
3. Reconsider our preconceived notions of which patients we think should have access to diabetes technology as a part of their treatment.

Part 2

Dr. Cheng will interview 2 Certified Diabetes Educators about how they address their own bias as Healthcare Professionals and apply technology solutions in their clinics to achieve optimal outcomes for Type 1 patients.

Christina Clarke, RD, CDE, CPT

Renee Golka, RN, BN, CDE, CPT

The session will conclude with an open discussion and time for participant questions.

Gather with your colleagues and clinic staff to watch and learn.
We look forward to a fun and engaging webinar!
