Adjusting Your Diabetes Medicine and Diet for a Barium Enema or Colonoscopy

The guidelines below will help you adjust your diabetes medicine and diet as you get ready for your test.

If you see a diabetes educator or diabetes specialist, contact them at least 1 week before your test to ask about adjusting your diabetes medicine or insulin.

Diet

- Follow the instructions the GI Clinic gives you about what you can eat or drink before the test.
- Treat the clear fluid days like a sick day. Use List 1 or 2 on the next page to choose what to eat and drink. Your diet can be changed to clear fluids in one of these ways:
  1. If you count carbohydrates, try to drink the same amount of carbohydrate as you would eat at each meal and snack.
  2. If you follow a meal pattern, any item from List 1 will replace 1 serving from the grains and starches, fruit, milk and alternatives, or other choices group.
  3. If you don’t follow a special diet or meal plan, eat or drink 1 item from List 1 every hour.
- If your blood sugar drops below 4.0 mmol/L or if you have symptoms of low blood sugar, take 15 grams of a carbohydrate-containing fluid from List 1.
  Test your blood sugar again in 15 minutes. If your blood sugar is still low, take another 15 grams of carbohydrate-containing fluid from List 1.
- If you’re worried your blood sugar will run too low, take extra fluid from List 1.

<tr>
<td>• 1 cup (250 mL) sports drinks (e.g., Gatorade®)</td>
<td>• diet popsicle</td>
</tr>
<tr>
<td></td>
<td>• diet Jell-O®</td>
</tr>
</tbody>
</table>

**Testing Your Blood Sugar**

Test your blood sugar anytime you feel your blood sugar is low or high.

- Test your blood sugar at least every 4 hours. Blood sugars in the range of 8 to 12 mmol/L are fine for these 2 days, even if it’s higher than your usual target.
- If you have type 1 diabetes and your sugars are over 14 mmol/L, test your urine or blood for ketones.
  - If positive for ketones, you may need extra insulin. Moderate to large ketones may mean that you’re in DKA (diabetic ketoacidosis) and need to go to the Emergency Department right away.
  - If you’re worried about your blood sugar level, speak with your healthcare provider or diabetes educator.
## Adjusting Your Diabetes Medicine

### If You Take Insulin

#### The Day Before the Test

**Morning**

- **Basal Insulin:** Take your regular dose of basal insulin (Humulin N®, Novolin® NPH, Lantus®, Basaglar®, Toujeo®, Levemir® or Tresiba®). Tresiba® may need to be reduced for 2–3 days before the procedure. Talk with your healthcare provider.
  
  Your dose will be _____ units.

- **Premix Insulin:** Reduce your dose of premix insulin (Humulin 30/70®, Novolin 30/70®, or Humalog 25/75®) by 25% (or the amount your healthcare provider tells you) for your breakfast meal.
  
  Your dose will be _____ units.

- **Insulin Pump:** Keep the same basal rate.

**Meals**

- **Bolus (meal) Insulin:** Reduce your dose of bolus (meal) insulin (Apidra®, Humalog®, NovoRapid®, Fiasp®, Humulin R®, or Novolin® Toronto) by 25% (or the amount your healthcare provider tells you). You may need to reduce your dose of these meal insulins more if your blood sugar becomes low.
  
  Your dose will be _____ units.

- **Premix Insulin:** Reduce your dose of supper premix insulin (Humulin 30/70®, Novolin 30/70®, or Humalog 25/75®) by 25% (or the amount your healthcare provider tells you).
  
  Your dose will be _____ units.

**Evening/Bedtime**

- **Basal Insulin:** Reduce your dose of basal insulin (Humulin N®, Novolin® NPH, Lantus®, Basaglar®, Toujeo®, Levemir® or Tresiba®) by 25% or the amount your healthcare provider tells you. Tresiba® may need to be reduced for 2–3 days before the procedure. Talk with your healthcare provider.
  
  Your dose will be _____ units.

- **Insulin Pump:** You may need to reduce your basal rate by 10% to 20% overnight if there are concerns about low blood sugar. If there are no concerns, keep the same basal rate.
### Test Day

**Morning**

- **Bolus (meal) Insulin:** Don’t take your morning meal (bolus) insulin (Apidra®, Humalog®, NovoRapid®, Fiasp®, Humulin R®, or Novolin® Toronto).

- **Premix Insulin:** Don’t take your morning premix insulin (Humulin 30/70®, Novolin 30/70, or Humalog 25/75°).

- **Basal Insulin:** Reduce your dose of basal insulin (Humulin N®, Novolin® NPH, Lantus®, Basaglar®, Toujeo®, Levemir® or Tresiba®) by 25% or the amount your healthcare provider tells you. Tresiba® may need to be reduced for 2–3 days before the procedure. Talk with your healthcare provider.

  Your dose will be ______ units.

- **Insulin Pump:** You may need to reduce your basal rate by 10% to 20% overnight if there are concerns about low blood sugar. If there are no concerns, keep the same basal rate.

*Be sure to bring a source of fast-acting sugar and your blood glucose meter with you.*

**After the Test**

- **Premix Insulin:** Reduce your morning dose of premix insulin (Humulin 30/70®, Novolin 30/70®, or Humalog 25/75°) by 25% (or the amount your healthcare provider tells you) for your first meal after the test.

  Your dose will be ______ units.

- **All other insulin:** Take as prescribed.

### If You Take Diabetes Medicine Other Than Insulin

**The Day Before the Test**

- Take your medicine as usual in the morning and at lunch or as your healthcare provider tells you.

- **Don’t take any diabetes medicine with or after your supper** unless your healthcare provider tells you to.

**Test Day**

- Don’t take any diabetes medicine until after your test is done and you’re eating. Then take it as per your scheduled dose.

*Be sure to bring a source of fast-acting sugar and your blood glucose meter with you.*
